

## **WholeBrain Creativity's Suite of Assessments (NBI©)**

WholeBrain Creativity provides a suite of NBI© based assessments designed to meet a diversity of client learning and development needs. The tools are based on leading edge psychological and neuroscience research into the nature and processes of the human brain and aim to provide insights into social and emotional intelligence. Such insights can lead to increased effectiveness in a wide range of individual, team and leadership situations. Following are the core corporate learning and development assessments currently available:

**General Adult Assessment** - This instrument measures thinking preferences. Gaining insight into the way we prefer to think makes us more aware of and sensitive to the preferences of others. Developing better relationships, making more dynamic contributions in the team and making sound and relevant decisions are but a few of the advantages of understanding your own thinking profile.

**Skills Assessment** - This instrument identifies an individual's skills. You may have acquired skills in a particular area that is not really indicative of your thinking preference or you may have a very strong thinking preference in one area, but have never had the opportunity to develop the necessary skills. Comparing the skills profile with your adult preference profile will complete the picture for you.

**Leadership Assessment** - Your Leadership Brain Profile will give you an insight into your leadership style, the preferences which guide you when operating in a leadership role. Developing a better leadership style, making more dynamic contributions and making better decisions in the company are but a few of the advantages of understanding your own leadership thinking preference profile.

**Creativity Assessment** - Your Creativity Brain Profile will give you an insight into "how you are creative." Creativity is not limited to only a few select individuals. It is a capacity all people have and can develop. This instrument identifies the types of creativity you use and apply. Armed with this understanding you can begin to leverage your own creative abilities for individual and organizational performance.

**Learning Assessment** - Your Learning Brain Profile will give you an insight into your learning style. The assessment focuses on adult learning thinking preferences. The knowledge gained from this tool can help you understand what types of learning activities come naturally as well as those that will require concerted effort in order for you to maximize your development potential.

**Teacher/Trainer Assessment** – The Teacher/Trainer Instrument is a special version of the adult instrument. The focus is on your thinking preferences in the teaching and training environment. The brain profile and the report are written with a teacher/trainer focus.
